

## Increasing appointment availability with a new Dentist and two new surgeries

We appreciate that over the last few months you have been waiting longer than normal to see us for treatment and we thank you for bearing with us. We are delighted to share with you news of how we have increased our appointment capacity as we welcome a new dentist to our team and start treating patients in our two additional surgeries.

The Devonshire House team

### Introducing Sumeet Oberai our new Specialist Prosthodontist

It is with great pleasure that we welcome Specialist Prosthodontist Sumeet Oberai to Devonshire House. Sumeet joins our team at Queen Edith's Way offering both general and specialist dentistry and brings with him a wealth of experience.

If you don't have a specific Prosthodontist in mind, we recommend booking an appointment with Sumeet who will be able to see you with a minimum waiting time.

[Find out more about Sumeet](#)

### New garden surgeries

If you haven't yet seen the new garden surgeries at our main practice we thought you might like to take a virtual tour via our walk through video. Comprising of two large surgeries and a sterilisation room, our new build takes us to 14 surgeries across both of our practices enabling us to offer you more appointments and help reduce waiting times.

Our Prosthodontists, Orthodontist and Hygienists are already busy treating patients in both surgeries and look forward to showing you around when you're next at Queen Edith's Way. However, it's not just our patients who are reaping the rewards. Featuring a sedum green roof to help insulate the building, it also provides a microclimate for local birds and insects.

## Recycle your dental care products at Devonshire House

We now have recycling boxes at both of our practices where you can recycle:

- Toothpaste tubes and caps
- Plastic toothbrushes
- Electric toothbrush heads which don't contain an RFID microchip
- Interdental brushes and floss containers

With 200 million toothbrushes thrown away every year in the UK, the amount of dental waste produced by every single household in Britain is huge.

Help us to help the planet by recycling your dental products.
